

My First LaTeX Document

A. Student

September 10, 2025

1 Introduction

Hello, world! This is my first document created with L^AT_EX. You write text just like this, and LaTeX handles all the formatting. It automatically indents new paragraphs.

You can easily add text formatting like **bold text** or *italic text*.

2 Why LaTeX is Useful

One of the main strengths of LaTeX is typesetting mathematics. You can write simple inline equations like Einstein's famous $E = mc^2$, or more complex displayed equations like Euler's identity:

$$e^{i\pi} + 1 = 0$$

It's also great for creating structured lists:

- Item one is for organization.
- Item two is for beautiful math.
- Item three is for automated references. As we saw in section 1, cross-referencing is simple!

This is just the beginning of what is possible.
